Limit Order Journey

24 – 28 August 2026

Every limit order I took in these five days. The setup before it filled, and what price did after.
Winners and losers both – nothing removed.

10	6	4	8R
TOTAL TRADES	TP	SL	AT 1:2 PLAN

How this is counted

- The plan is always 1:2. Every trade is counted at 1:2, nothing more.
- When price ran further than that, the extra is written down separately
- and never added to the total.
- A loss counts as one full R against me.

Ten trades proves nothing. Let's see the number after fifty,
and again after a hundred. That is the only honest way to read a win rate.

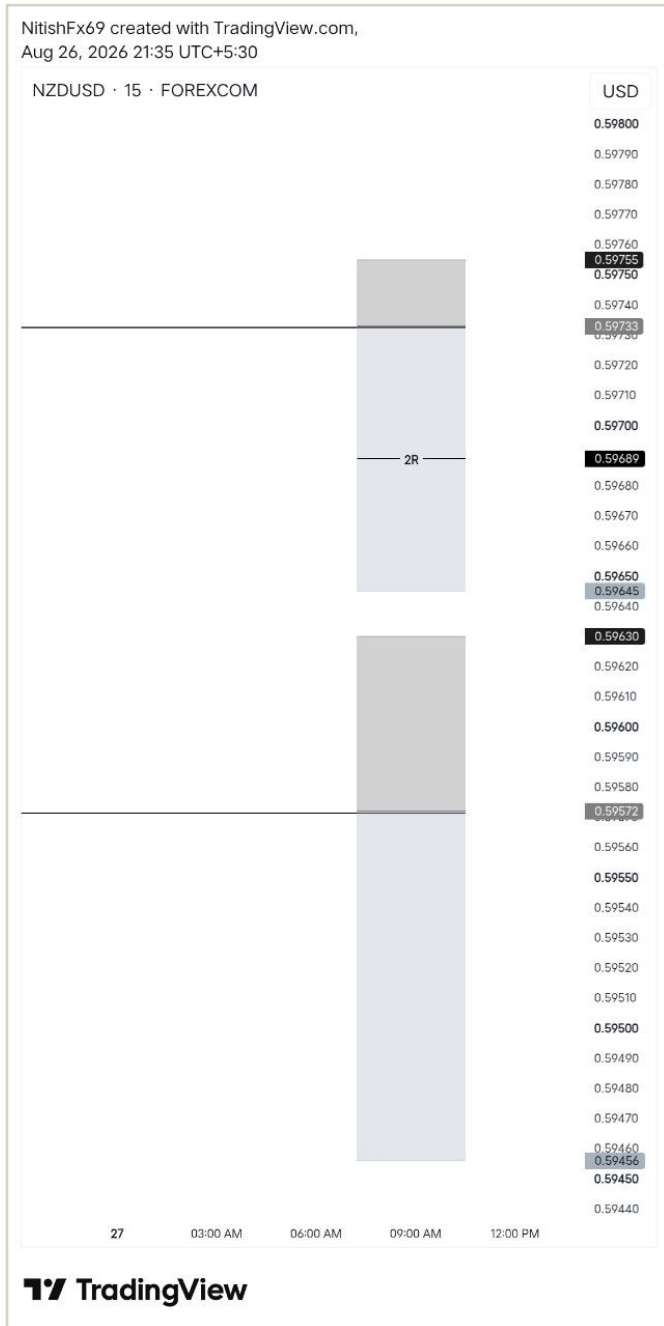

Charts are read newest first. Latest trade is on the next page, then
backwards to 24 August.

28-Aug NZD/USD

SELL

TP

counted 1:2

BEFORE - order placed

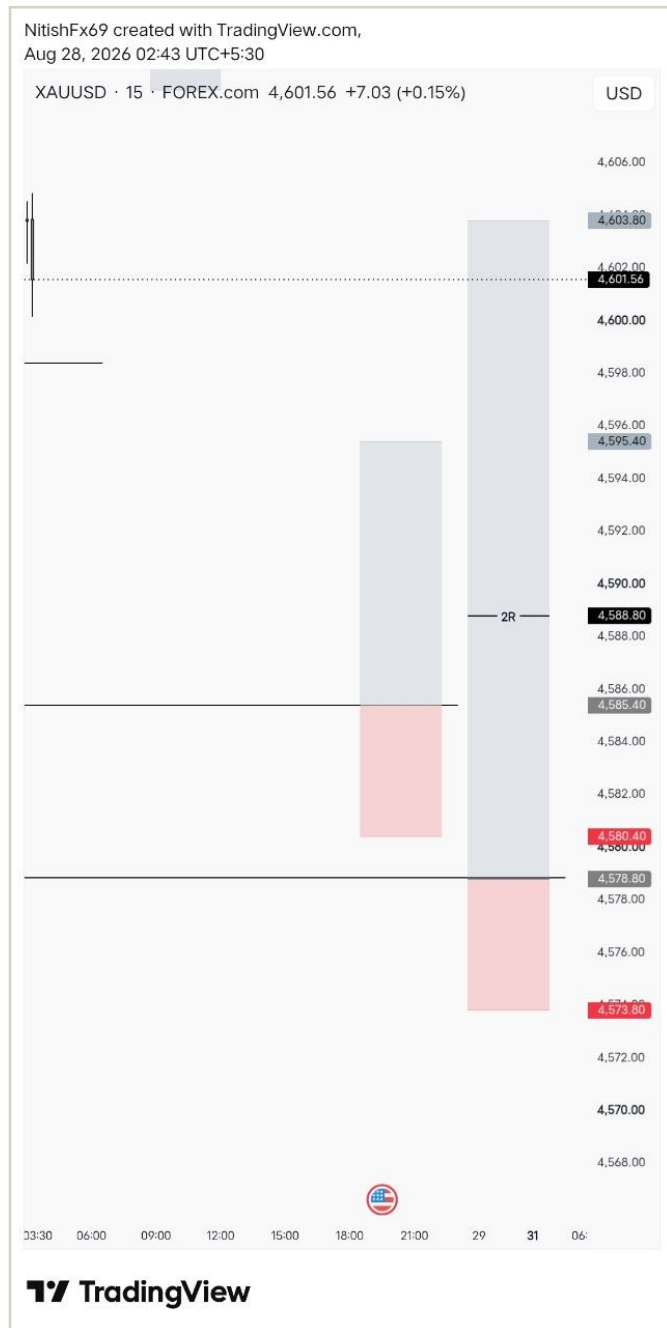

AFTER - what price did

Sell zone 0.59572-0.59630. Price tapped the level, rejected, and fell to 0.59459 - target hit.

28-Aug XAU/USD

BUY SL - 1R

BUY TP counted 1:2

BEFORE - order placed

AFTER - what price did

Upper buy zone 4580.40-4585.40. Price entered, could not hold, and took the stop at 4580.40. Lower buy zone 4573.80-4578.85. Filled straight after the first stop and ran up to 4589 - target hit.

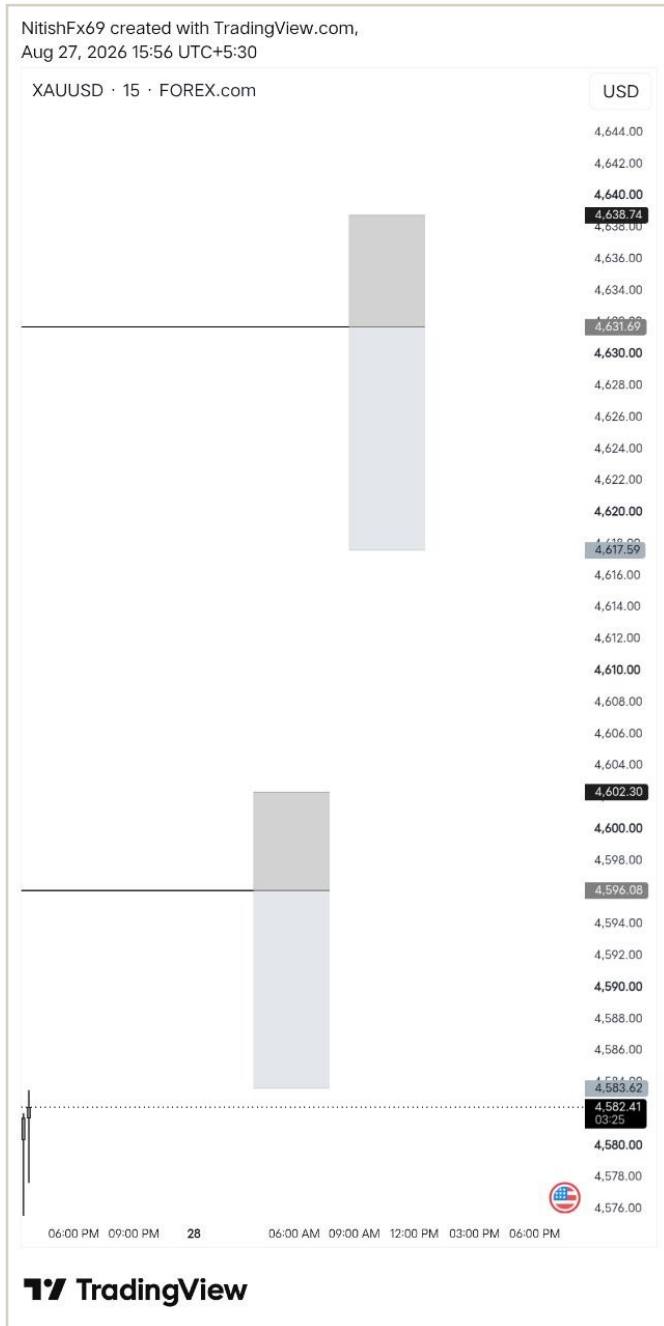

27-Aug XAU/USD

SELL

TP

counted 1:2

· ran to 1:5 (extra, not counted)

BEFORE - order placed

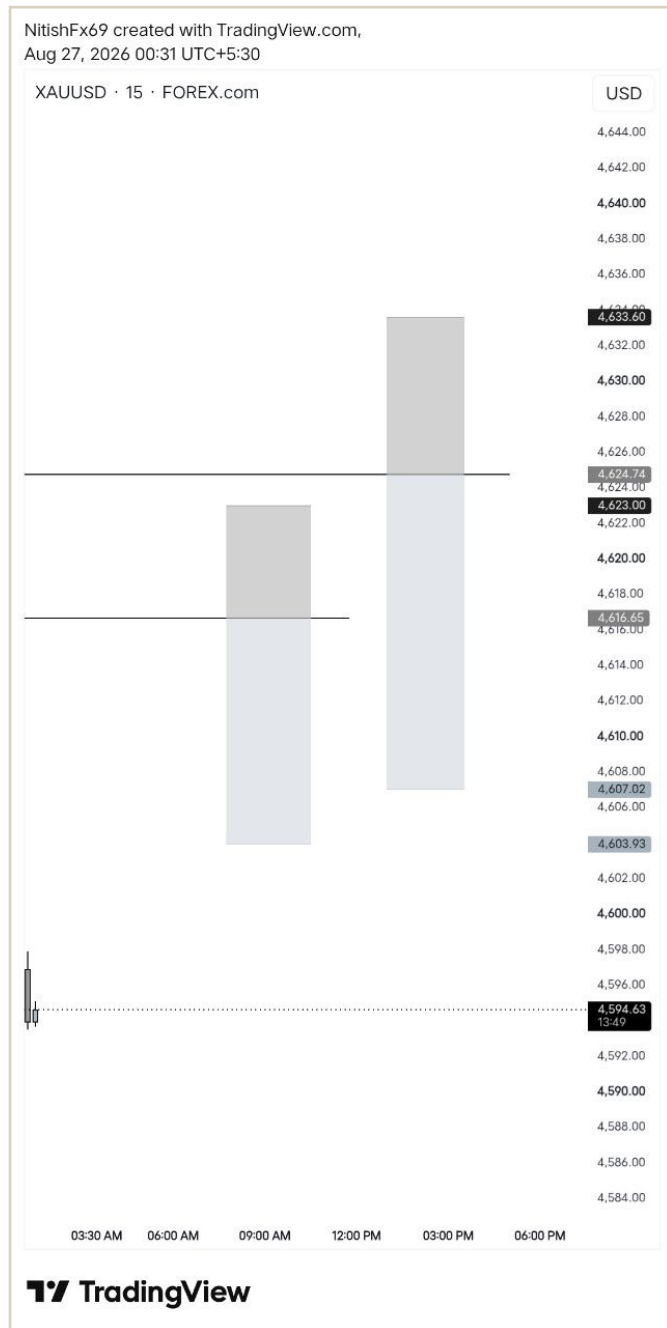

AFTER - what price did

Lower sell zone 4596.08-4602.30. Price tapped in, held the level, then dropped to 4581 - target hit and kept running.

27-Aug XAU/USD

SELL SL - 1R

SELL TP counted 1:2

BEFORE - order placed

AFTER - what price did

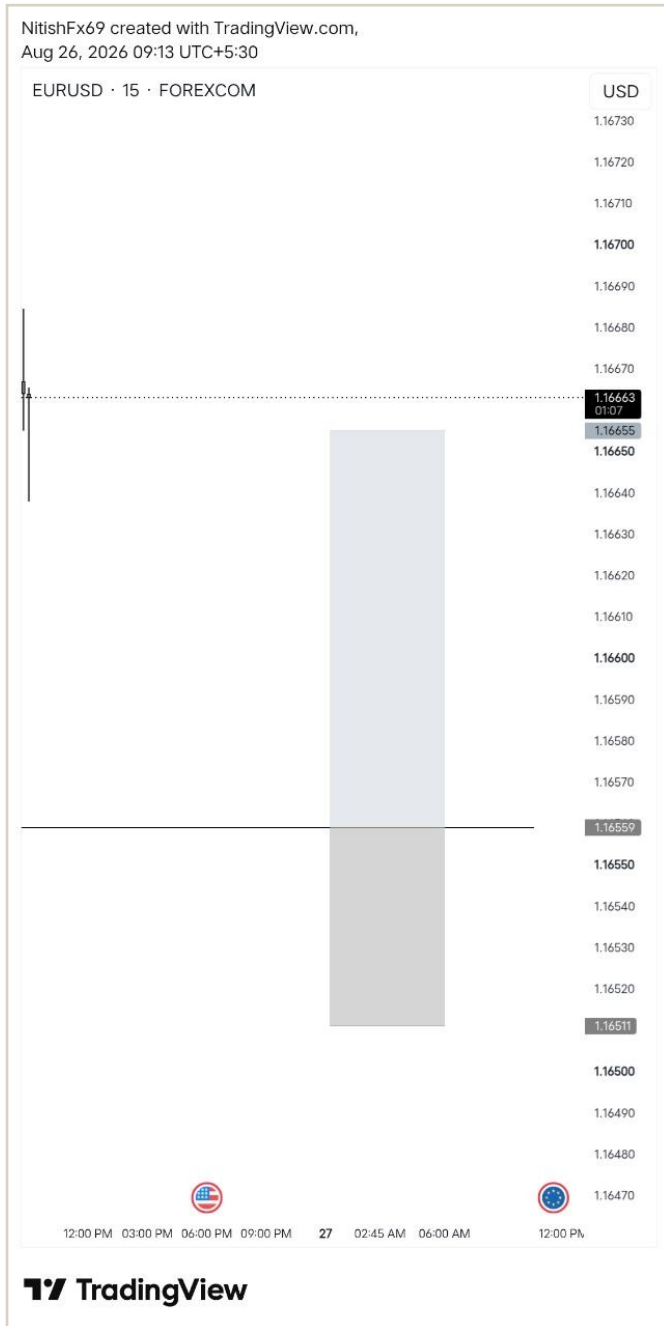

Upper sell zone 4624.74-4633.60. Price came back up through the zone and kept going to 4642 - stop taken. Lower sell zone 4616.65-4623.00. Filled and dropped to 4603 - target hit.

26-Aug EUR/USD

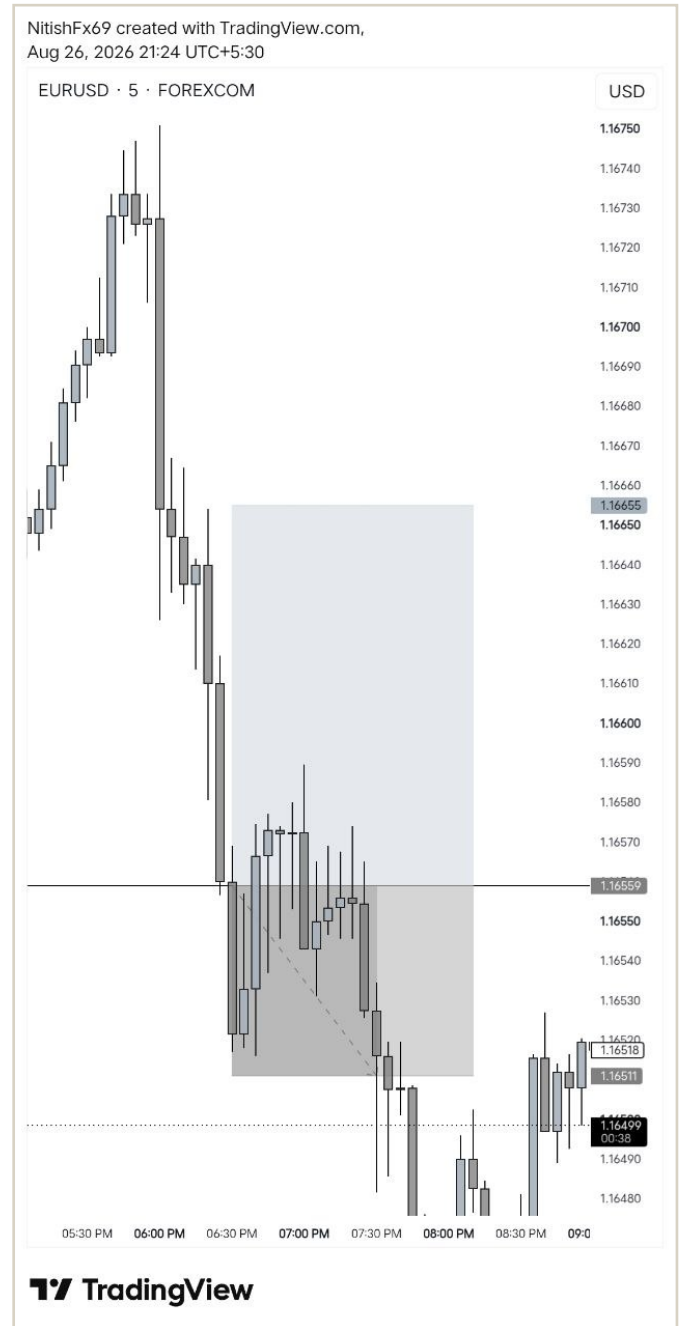

BUY

SL

- 1R

BEFORE - order placed

AFTER - what price did

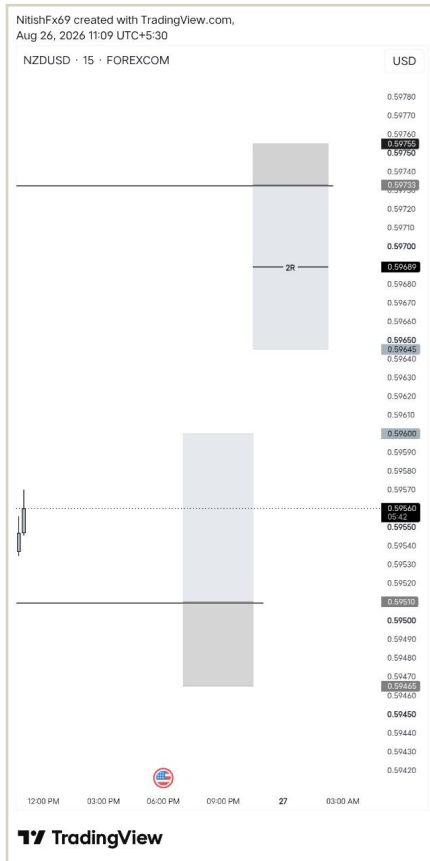

Buy zone 1.16511-1.16559. Price entered the zone, held for a while, then broke straight through and took the stop at 1.16499.

26-Aug NZD/USD

BUY

SL

- 1R

BEFORE - order placed

AFTER - what price did

AFTER - and then this

Buy zone 0.59465-0.59510. Price cut through the zone and took the stop at 0.59462. After the stop it turned and ran back up past 0.59600 - right idea, wrong level.

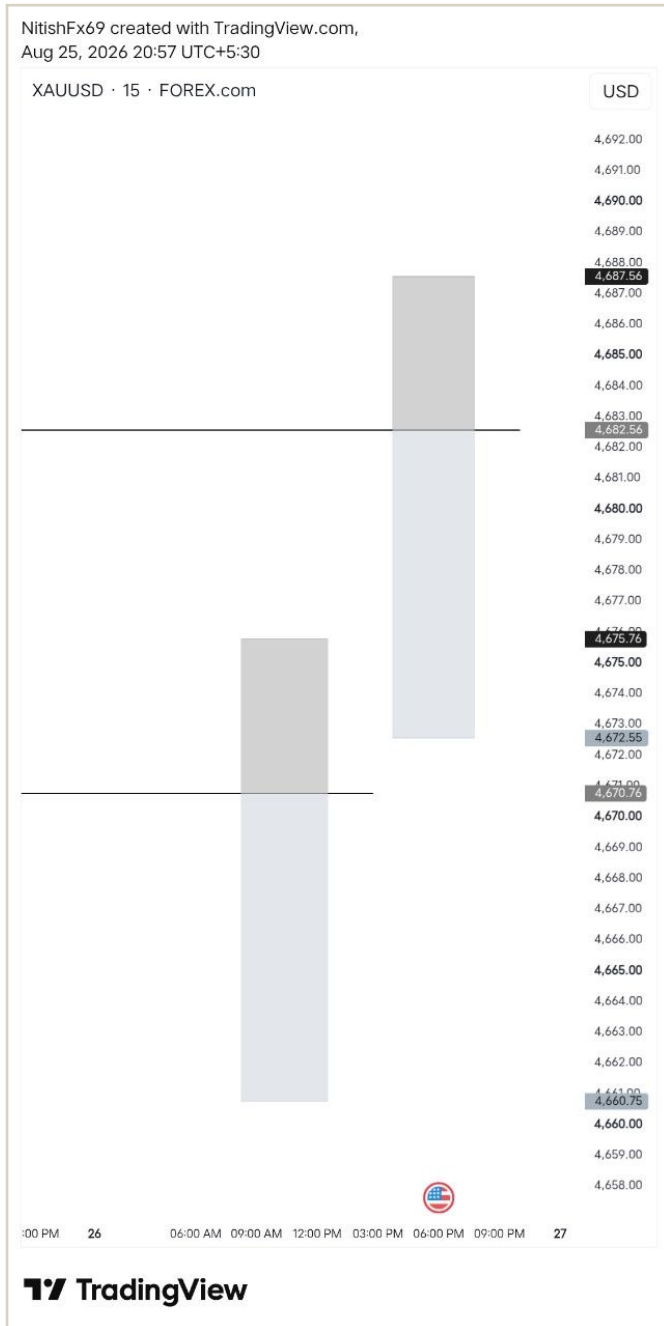

26-Aug XAU/USD

SELL

TP

counted 1:2

· ran to 1:17 (extra, not counted)

BEFORE - order placed

AFTER - what price did

Two sell zones set 25-Aug; upper 4682.56 / lower 4670.76. Price filled the 4670.76 zone and ran to 4630.

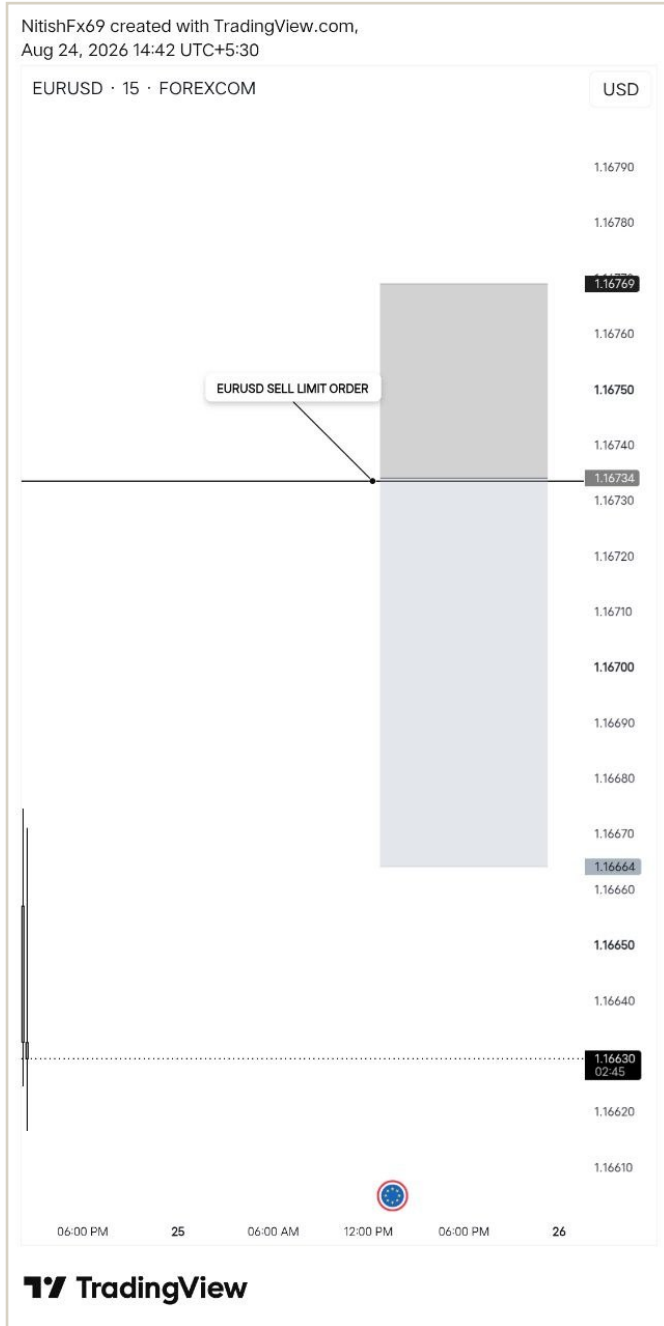

24-Aug EUR/USD

SELL

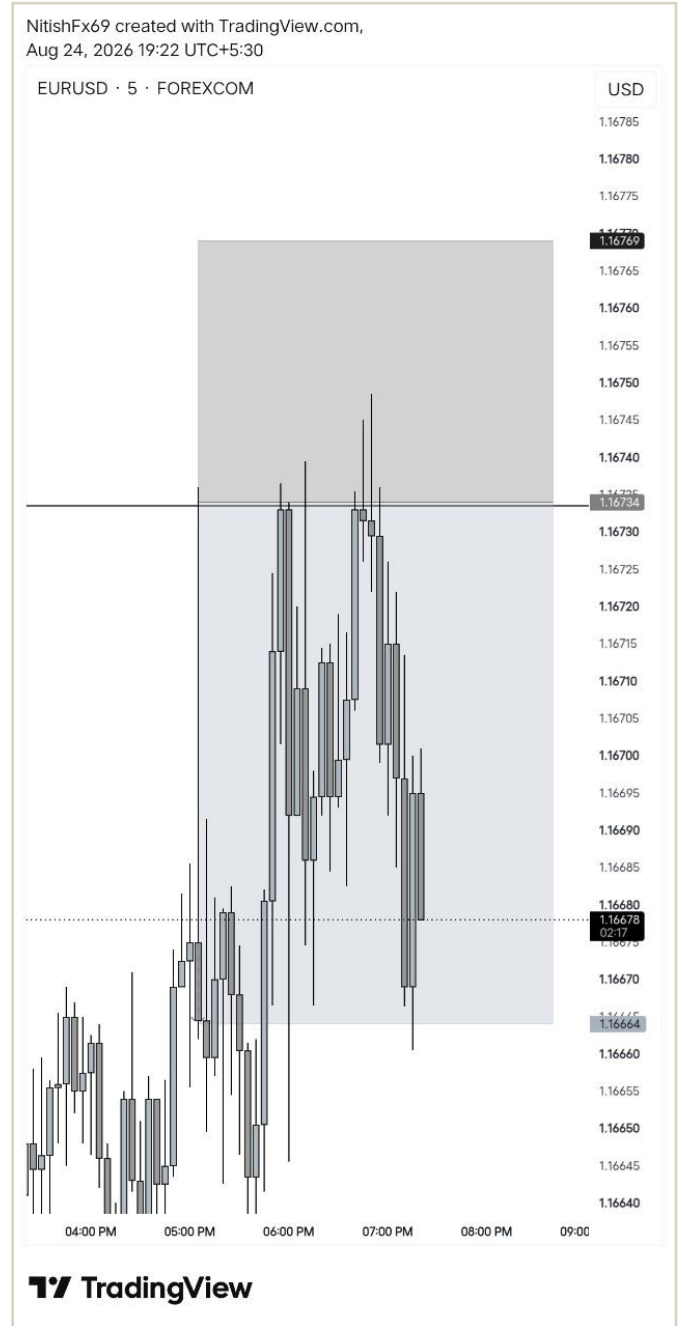

TP

counted 1:2

· ran to 1:6 (extra, not counted)

BEFORE - order placed

AFTER - what price did

Sell limit at 1.16734, zone 1.16664-1.16769. Entry chart 15m, result chart 5m.

That is the whole week

Six targets, four stops, eight R at the plan. The two biggest runners went 1:17 and 1:6, and neither of them is in that eight – the plan closes at 1:2 and that is what gets counted.

The stops are in here for a reason. On 26 August the NZD buy got taken out and price turned straight back up without me. That happens. A journal that only shows the good days is not a journal.

Every one of these was a limit order

Level marked in advance, order left sitting, no watching the screen and no chasing. Price either came to it or it did not.

Let's see the journey after 50 and 100 trades.

That is when a win rate starts meaning something.

If you want to watch it happen live, join now – price goes up from next month.
